so yea.

there's comet approaching the earth

it is visible now with naked eye in the night as they say

nasa says it will be closest to earth on 22july just 2/3 of distance from the sun

<https://www.accuweather.com/en/space-news/how-to-see-comet-neowise-in-the-sky/772795>

>Why Newton Believed a Comet Caused Noah's Flood

>Whiston argued that a comet passing close to Earth could explain these phenomena. The gravitational pull of the comet, he said, fractured the planet's crust. And the vaporous tail of the comet saturated the upper atmosphere with excess water, which lead to a cataclysmic rainfall.

>Whiston dedicated his book to Newton, who endorsed the theories as plausible and reasonable.

We are approaching the day and there's been a bit of interest so I'm quite hopeful a few folks will come on out. If the astronomers are to be believed, the 11th of July should start out with some neat stuff. Looking forward, all! Kek wills it.

there was an anon who was claiming we were all going to be annihilated on 7/7, and he cited the greenland movie as evidence of predictive programming. the movie was originally going to be released on 7/7 before it was delayed to 7/14. ive been getting skeptical of doomsday predictions on here because there have been at least dozens since COVID started, and we are still here all of us thankfully. however, i do find it a bit coincidental that Neowise is just now flying by us as the release date for Greenland 2020 looms ahead

>I know there's another comet called Comet SWAN

There's also another comet called C/2020 F3 (NEOWISE) that's currently visible to the naked eye. I tried to take a photo of it but it's far too bright outside at my latitude. To hell with the midnight sun.
